

## 1 W wearable wireless power transmitter based on STWBC-WA

Data brief

### Features

- STWBC-WA based wireless power transmitter
  - Additional transmitter module compatible with the STEVAL-ISB038V1 reference kit
  - Cost effective Half Bridge topology with integrated drivers
  - Optional Full Bridge configuration for 3 W applications
  - Active presence detector
  - 2-layer PCB for easy design
  - Turnkey solution or customizable via APIs
  - Parametric customization via graphical interface
- Full KIT characteristics:
  - 11 mm coil on Receiver
  - 20 mm coil on Transmitter
  - 1 Watt delivered on Receiver side

- USB 5 V input
- Foreign Object Detection (FOD) optional
- Graphical interface for monitoring behavior
- Total reference design
- RoHS compliant
- STWLC04 wireless power receiver
  - Output voltage: 5 V regulated voltage
  - Integrated high efficiency synchronous rectifier
  - Li-Ion/Li-Pol charger functionality
  - 4-layer PCB for easy design

### Description

STEVAL-ISB038V1T is the wireless battery charger transmitter module in the STEVAL-ISB038V1 Reference Design Kit.

The STEVAL-ISB038V1 is a wireless battery charger evaluation kit designed for ultra-compact battery operated devices such as wearable gear, smartwatches, Internet Of Things sensors, medical devices, etc.

The kit supports wireless power transfer of 1 Watt over an 11 mm coil on the receiver side and 20 mm on transmitter side.

The kit configuration delivers 1 Watt of power at the receiver side.

While the Kit is configured to support low power (1 W) applications, it can support up to 3 W applications with wider coils or by switching to full-bridge configuration on the transmitters.

The STWBC-WA transmitter is based on a cost-effective half bridge topology (full-bridge optional) offering the flexibility of a powerful software API allowing LED and GPIO control, as well as adding external interfaces via I<sup>2</sup>C and UART communication ports.

# 1 Continued description

The STWLC04 receiver can deliver the output power in the following modes:

1. as a power supply with configured output voltage
2. as a CC/CV battery charger with configurable charging current and voltage

The full kit provides the STWBC-WA demo board, the STWLC04 demo board, a graphical interface to monitor the transmitter behavior, schematics, layout files and bill of materials.

Tools for the STEVAL-ISB038V1 are available on [www.st.com](http://www.st.com) and allow users to access runtime information such as the power delivered or the protocol status, as well as adjust certain parameters.
